

Patient Name: Mohammad Hassan Banat	Study Date: 2023-01-05
Procedure: Brain With Contrast	Patient ID: 18559
Modality Name: MR	Age: 44 Years

Brain MRI:

Axial Flair, T1, DWI and T2 weighted images; sagittal T2 and coronal T2 weighted images were obtained.

Comparison with previous MRIs dated 14.6.2022 and 21.9.2022 has been done.

- The previously visualized mass lesion in left cerebral hemisphere appears almost the same as in previous study with no significant changes seen regarding size, signal intensity, extension of this mass lesion and the white matter edema.
- No appreciable enhancement could be seen as well.
- No new lesions.
